Translation of the original instructions

## Your Advantages

- For loads with high inrush current
- Reliable switching of energysaving- and LED lamps
- High electrical life due to hybrid technology

## Features

- According to IEC/EN 60 947-4-3
- Measured nominal current 20 A
- High electric life of $>10^{6}$ switching cycles at AC 15 10 A inductive
- Silent switching
- To switch resistive, inductive and capacitive loads
- Switching at zero-crossing
- 1 NO contact
- 17.5 mm width

## Approvals and Markings

## C

## Applications

The hybrid power relay is designed to switch high inductive or capacitive loads, e.g. energy saving and LED lamps.
Other applications are in heating, air conditioning and lighting systems.

## Function

The hybrid switching relay contains an output relay with parallel connected triac, when switching the triac takes the load. The continous current is then lead over the relay contact due to the higher losses on the triac.
As the triac only switches off at zero-crossing, the device can only switch AC-loads.

## Indication

LED on, when power supply connected

## Connection Terminals

| Terminal Designation | Signal Description |
| :--- | :--- |
| A1 / A2 | Operating voltage |
| $13 / 14$ | Contact |
