## VARIMETER

Frequency Relay
IK 9143, SK 9143

Function Diagram

## Circuit Diagrams

## Connection Terminals

| Terminal designation | Signal description |
| :--- | :--- |
| A1, A2 | Supply voltage / measuring voltage |
| $11,12,14$ | Changeover contact |

## Your Advantages

- Easy setting
- Without auxiliary voltage

## Features

- According to IEC/EN 60 255-1
- Monitoring of overfrequency and underfrequency (selectable) in A.C. power systems
- Selection of frequency range for 50 or 60 Hz systems
- Adjustable response value
- Adjustable hysteresis
- De-energized on trip (output relay not activated in case of error)
- LED indicators for measuring voltage and contact position
- 1 changeover contact
- As option energized on trip (output relay activated in case of error)
- Devices available in 2 enclosure versions:

IK 9143: depth 58 mm , with terminals at the bottom for installation systems and industrial distribution systems according to DIN 43880
SK 9143: depth 98 mm , with terminals at the top for cabinets with mounting plate and cable duct

- 17.5 mm width

## Approvals and Markings

## C $\epsilon$

## Applications

Frequency monitoring function in in-plant generation units and local power supply systems

## Function

The system to be monitored is connected to the terminals A1-A2. Its internal supply voltage is also taken from these terminals. The input frequency is compared to response value to be set at the unit.

In overfrequency mode, the output relay switches into alarm position when the preset response value is exceeded. When the system frequency once more falls below the response value minus the preset hysteresis, the output relay will switch back into normal position.

In underfrequency mode, the output relay switches into alarm position when the actual value falls below the preset response value. When the system frequency once more exceeds the response value plus hysteresis, the output relay will switch back into normal position.

If de-energized on trip is selected, the output relay is energized (11-14 closed) in normal status.
If energized on trip is selected, the output relay is energized (11-14 closed) in alarm status.

## Indicators

Green LED:

Yellow LEDs:

On, when measuring voltage is connected to A1-A2

On, when the output relay is energized (contacts 11-14 closed)

## Notes

Monitoring mode underfrequency or overfrequency
The mode can be selected by means of the slide switch at the front of the unit. The operating mode de-energized or energized on trip as well as the response value do not change.
